

HOW CAN WE DECARBONISE THE EDUCATION ESTATE?

The education estate represents 36% of all public sector building emissions in England, and schools alone spend over £640m a year on energy.

Meeting the challenge of fighting climate change plays a significant part in creating a safer, better, greener world for future generations.

LocatED is working to ensure the education estate leads the way in the journey towards net zero and a more sustainable future.

LocatED has been commissioned by the Department for Education to lead market engagement and procure a 'proof of concept' feasibility study that will investigate interest in the development of a new loan and delivery scheme - Net Zero Accelerator.

This study will articulate a model for the private sector to work in partnership with LocatED to deliver Net Zero at selected group of schools which is commercially viable.
